DipoleLock Copy-Protection

Developers are engaged in a marathon war against software pirates around the globe. Don't gamble your business with untested protection schemes.

DipoleLock is BATTLE-PROVEN SOFTWARE PROTECTION for thousands of clients worldwide. Since 1999 we have continued to deliver the BEST SECURITY at the BEST PRICE.

All DipoleLock Protection Tools are priced on a per product basis with no royalty hassles. We currently support XP, ActiveX, 9x, ME, 2000 and NT.

Key Features of DipoleLock

Proprietary Technology

All modern IDE hard disk drives have burned in serial numbers . Not to be confused with the easily changed "Volume" serial number, the HDSN is a permanent read-only attribute of a personal computer hard drive. Normally the HDSN is very difficult to access, but DipoleLock reads the HSDN , then uses this information in its proprietary licensing algorithms.

The benefit is exceptional---HDD Cloning programs that copy the entire hard drive will succeed in breaking other simple copy protection schemes---but not DipoleLock.

Easy License

Sometimes, customers need copy protection to be simple - this software runs on this computer, period. No transfer,no network license,no trial period,no number of copies, just this software runs on this computer, period. And if the software gets offloaded and put back, or the software is deleted, and restored later, on the ENTIRE hard drive gets erased and restored...this software STILL runs on this computer, period.

This is the beauty of our new Easy License - when the enabled software is sold, and it knows where it needs to run, this optional license will simplify, if not eradicate, most copy protection support issues.

Dynamic Multi-Key Encryption

We have increased the bit size of our Product Code and Unlock Key encryption. Never satisfied with good enough, we have also created a "dynamic multiple encryption key" scheme, so that encryption keys are constantly changing on the fly, truly a code breaker's nightmare. This also halts any attempts to create a rogue "key generator."

Enhanced Anti-Hacking

We include our anti-hacking layer with DipoleLock, it is a very critical component, as it stops the hacker from reverse engineering and circumventing the copy protection. This layer already encrypts your sensitive binary file, and guards against program patches while it is in memory.

Thank you for trying the DipoleLock Demo :

This is a fully functional demo of DipoleLock . You can integrate DipoleLock into your application in two easy steps . DipoleLock is based on a proprietary technology which allows you to restrict clients from copying your software without permission .
